Meet Scabby, the Giant Inflatable Rat Fighting for Labor Rights. 3. A read/write head or RW head is a device on the arm of a hard drive. It reads and writes data from the hard drive's disk platter. Hard drives usually have one read/write head for each platter side that resides on

the platter while idle. As the platter spins, an air cushion develops making the head float 3 to 20-millionths of an inch above the platter. When data needs to be read or written, the read/write arm is moved and controlled by a motor in the actuator. Below is an example of the inside of a desktop and laptop hard disk drive.

The student-run Dakota Venture Group, which launched in September 2006 at the University of North Dakota's Center for Innovation, knows college entrepreneurship from every angle. The students manage the fund 100 percent, investing in high-growth companies in the region. Managing directors and UND students Lee Groeschl, Amy Indridason, Shannon Pearson, Chris Virta and Dan Waind are committed to investing in early and seed-stage companies, especially UND student and alumni businesses. For student entrepreneurs looking for VC, they advise being articulate about your business and capable of answering questions on the fly. "Present

your information concisely and clearly because [investors] see a lot of different businesses," says Indridason. "Make it stand out yet be consistent and clear so it's something they can absorb very easily and quickly.". What Is the Connection Between Mark Twain and Halley's Comet?

Student businesses are like any other business in one sense: They desperately need capital and business advice early on. Lucky for them, some VC firms are taking a special interest in student businesses. Highland Capital Partners, a VC firm in Lexington, Massachusetts, has a long history of working with universities, including the Massachusetts Institute of Technology, and has funded a few of the high growth-potential startups sprouting from that environment, says Michael Gaiss, senior vice president of HCP. "Big picture-wise, maybe we can help [support] people with [innovative ideas]," says Gaiss. "Maybe there's a potential company to invest in. If not, we can share our expertise with some very compelling [students] and perhaps down the road, [they'll start] an interesting company we can invest in.". The pterion is the thinnest part of the skull and is the junction of four separate skull bones. The skull is made up of numerous plates that are loosely joined in TEENhood to allow it to grow. Blows to the temple

region can cause dangerous bleeding, due to the major artery running underneath. Although the pterion roughly corresponds to the temple, the main bones beneath the temple are the temporal bone and the sphenoid bone. What Are the Symptoms of Arthritis in the Neck?. News The Ethereum Merge is complete: Here's what that means for investors—and the environment. A riddle is a question or statement that has a double meaning and is used as a puzzle for others to solve. Sometimes a riddle can be funny, like a joke, and sometimes it can be difficult and thought provoking. In ancient Greece, riddles were by philosophers like Plato and Aristotle to display wit and intelligence. Shakespeare even used riddles in his famous writings and theater productions. For a shower that packs a punch, give the Wassa High Pressure Shower Head a look. Despite its compact profile, it magically generates "some serious shower velocity" from even a relatively low pressure water supply. "These people are sorcerers," said one clearly enchanted user. Over 3,700 reviewers give this

one five stars for a high pressure shower head that's sturdy, easy to install, resists hard water deposits (so it's easy to clean) and is amazing value for such exceptional performance. Sea wrote: Lem, No offense, but in that particular build you should have stepped up to an Albert Clark Bad Attitude Barbed Wire series camshaft. JMO. So when we change to the aftermarket block c460 head and intake deal how much weight should I plan for in adding to the car? How much power is needed to plan for to hit this E.T goal? 1000-1100HP? I have always ran 4.300 forged eagle stuff and I currently have 3 of these cranks. One new in the box. IF YOU DONT LIKE MY OPINION DONT ASK. Phillip did 1200 with a single 4 with C460 heads on a 645" motor.

Sell the A460 stuff and step up. If there is an issue with the cost of the difference, then you shouldn't even have any real life interest in any of this kinda racing cylinder head stuff. I have a completed set of "E" heads for sale with no rockers and if you gotta even ask how much they are you don't want 'em. In Stock at a Summit Racing Location. Ships Today. (6). Personally, in such a light car, I wouldn't get carried away with all that stroke. You can keep the piston speed the same with a little smaller motor and a little more rpm, make as much power and get down the track even quicker. D. Sea wrote: Lem, No offense, but in that particular build you should have stepped up to an Albert Clark Bad Attitude Barbed Wire series camshaft. JMO. I will say I haven't built a C headed engine, but I have seen several good pieces dyno'd and with 4.300 up to 4.750 stroke. What I have seen is the shorter stroke deal might get to 7400 with a good head and the 4.750 be at 7200 and approaching 7400 but not gaining hardly any hp. This is with an unported C single plane manifold. Permissions in this forum: You cannot reply to topics in this forum. There is also the Pro Filer BBF cylinder head which flows on par or better than the BT Thor. The A460 can be ported to the 470cfm range on the intake side, through a CNC program

that Total Engine Airflow (TEA) has. studly wrote: The A460 is what he currently has he does not want to replace, heads, pistons, and headers. the motor is not running what is should i am going to try to help him some this year the last 2 years i have been running small tire races and have not been able to help him, sine money is low this year i probbaly will have more time to go with him he is trying to run a 4.90 index class. I am putting some gear in the car to let the RPMS come up and try a couple converters and probbaly pull the intake and at least try to see what he has and if a blend an polish will help. This is a custom order part. You can order this part by Contacting Us. If you are an international customer and would like to change the currency that prices are displayed in, you can do so here. Please note that Checkout Prices will be in US Dollars. The heads already have a ton of money in them T&D Shaft stands welded, titanium intake and exhaust valves, titanium retainers, PAC triple springs, The cam is in the 880-890 range on lift already. I thought this motor at 638 cubic inches should have made in the 1150-1200hp range easily.guess i was wrong. thanks for all the comments and suggestions keep them coming Stan.
