check your regulator occasionally as you weld. As the gas level decreases, the cylinder pressure drops, causing the flow rate to change on single-stage regulators. Again, temperature changes have the same effect, so don't be surprised if you're adjusting the regulator more often than you expected. Departments must secure cylinders in accordance with Environmental Health and Safety Net # 60. A packing slip and list of serial numbers is left on the cylinder or placed in a convenient location by Central Storehouse staff for the department to retrieve and route as needed. Ending Sep 21 at 12:01PM PDT 5d 22h. 10 Cu Ft MC Acetylene Steel and 20 Cu Ft Steel Oxygen Cylinder Set DOT Approved. WelditU is an independent, reader-supported site that carefully handpicks every product. At no extra cost to you, we may earn a fee when you buy from a link. CGA-510 POL Acetylene Cylinder Tank to CGA-520 B Tank, Adaptor. from my welding and fabrication business, actually about a year before, I started looking on eBay for cylinders to buy. I found all I needed. 2 Acetylene, 2 Oxygen, 1 Argon and 1 Argon/CO2. I got a bill of sale from the seller, took it and the cylinders to my LWS and they simply logged in there system that I now own my cylinders. If they were out of static test, they may charge you what

they pay to have that done. I do not get MY cylinders refilled, I exchange them. They used to give you back a "customer owned" cylinder. Now, you may get one with their logo on it. You still own that cylinder. New 20 Cu Ft Steel Nitrogen Cylinder with CGA580 Valve Industrial DOT Approved. 40 cu/ft 75% Argon 25% CO2 Welding Gas Cylinder Tank CGA 580 - FULL. covered product or replace it. 80 cu/ft 75% Argon 25% CO2 Welding Gas Cylinder Tank CGA 580 - FULL - - Amazon.com. Popular Welding Gas Bottle Sizes for MIG and TIG. What Size Welding Gas Cylinder for MIG or TIG? Argon & CO2. Your safety is our priority. That's why all of our cylinder sizes, materials and valve types are determined by CGA, DOT and TC guidelines. We draw on decades of industry experience to determine which gases can be safely contained and transported in which type of gas cylinders. Knowing How Much Gas Is Left in the Cylinder. When you have two pieces of metal that you want to join together, there's no better way to do it than by welding. The idea is simple; you heat your work pieces up to the point that they actually melt and flow together creating a very strong bond. I turned in all my leased bottles, actually over a period of time as they emptied. In fact, I purchased so much gas over the years, they didn't charge me for any static testing. Affiliate Disclaimer: This post may contain links that will earn us a commission at no cost to you. This helps keep Weldguru a free resource for our readers. Same here in IL. Never had any issue with any LWS. from my welding and fabrication business, actually about a year before, I started looking on eBay for cylinders to buy. I

found all I needed. 2 Acetylene, 2 Oxygen, 1 Argon and 1 Argon/CO2. I got a bill of sale from the seller, took it and the cylinders to my LWS and they simply logged in there system that I now own my cylinders. If they were out of static test, they may charge you what they pay to have that done. I do not get MY cylinders refilled, I exchange them. They used to give you back a "customer owned" cylinder. Now, you may get one with their logo on it. You still own that cylinder. 4 Pk Customer Owned Neck Rings Welding Bottle Cylinder Tank Oxygen Helium Argon. All prices are F.O.B. Florida State University campus for normal deliveries. No extra charges on invoices are to be incurred for such items as hazardous, packing or regulatory compliance charges, etc. MIG Welding: MIG Welders are among the most common pieces of equipment available today. They use a continuous feed electrode that puddles on the metal, and a cylinder of shielding gas to keep air away from the weld. If you regularly receive cylinder deliveries to your building you can place your cylinder(s) for return in your "Empty" cylinder cage and Central Storehouse staff will pick them up at the same time your full cylinders are delivered. The largest of the three sizes provides plenty of use time without sacrificing too much

portability. So, if you have the room, and can afford it, go with the larger 125 cf tank. Otherwise, select the 40 or 80 cf tank based on your available space and budget. How Much Gas is Left in the Tank?.. . Lastly, while it's a fine line, there's an important difference here. DOT regs do NOT prohibit the ownership of any volume cylinder nor do they prevent suppliers from filling them. They prevent suppliers from taking possession of ANY size cylinder in trade that reasonable belief is that it's owned by someone else who isn't able to give consent to the change of ownership. PS--at some point, I'd like to get another MIG, but figured 'why keep the bottle around till then?'. Participate in over a dozen different forum sections and search/browse from nearly a million posts. I guess if You get desperate, You could slick up the company bottle neck rings with a Dynaflex and a coat of paint. I have not tried this yet. The filler won't fill them if they are out of date, but they can test them, fill them if they pass and bill You for the test. I am pretty sure the law reads that they must be in date to be filled, not just to be used, so You are stil legal expired, but can't fill until passing the test. I own at least 5 large cylinders (250 - 330 cu. ft., Oxygen and inert gas). I deal with Airgas in Massachusetts and an independent LWS in Illinois. None of

them have told me I can't own these cylinders. This "homeland security" BS is just that, BS. The tanks you have to worry about are those that are customer owned or rented, those are probably stamped differently. If your tanks are 80cv, you must own them because like Zapit said, you cannot rent 80cf cylinders. Bulk gas emergency (for orders, see Bulk Gas Support). If this is your first visit, be sure to. Your safety is our priority. That's why all of our cylinder sizes, materials and valve types are determined by CGA, DOT and TC guidelines. We draw on decades of industry experience to determine which gases can be safely contained and transported in which type of gas cylinders.

Flipper, We had thought of heading over to Traverse City on the western shores and then heading downstate, but just got our fill of trees by then and went running for the border. Is/are there roads that follow the shoreline on the western shore than will give you decent views of the lake or is it mostly just trees, trees and more trees!!!! Anyway, are there sections of lakefront on the lower peninsula that would remind you of anything similar to Hwy. 101 out in California, Oregon and Washington? Here you can join over 40,000 Welding Professionals & enthusiasts from around the world discussing all things related to Welding. You are

currently viewing as a guest which gives you limited access to view discussions. I called the dealer tuesday and he assured me tht it would not be a problem. So we will have to see what happens. Please reply with any questions and I will do my best to get you answers. I have been told by Numerous LWS that if the neck ring is blank its a CO (customer Owned) and that it does not matter the size 300 cf all the way down to a 20cf. The guy at ETOX told me he knows a bucnh of guys who have done that. They smooth it all out with a Tiger Disc. Also get asked just take this cylinder what does it matter if it belongs to someone else? Because if I take it and fill it. I have committed theft. I took something that doesn't belong to my company. We do get audited checking to make sure we aren't doing this. Companies that do take cylinders over 80cf that don't belong to them are breaking the law whether it's benefitting you or not shouldn't matter. If you don't like tall trees, I could take you to a couple of big swamps here on the east coast. I've got a 330 that my local shop exchanges in MS. No problem. The original one I started with had a different company on the ring too. I think this issue highlights a benefit of having a good relationship with a local shop and one of the perquisites of buying your

machines locally. I deal with ETOX who is owned by Matheson Trigas. They keep a Supply of "Slick Neck" Bottles on hand to swap out. They seem to cater to rig welders when it comes to bottles. What is the difference if you have a cylinder without the collar or one with the supplier's name? It seems like additional work and record keeping for the supplier. It would appear the supplier still has the responsibility and cost of having the cylinders inspected and tested to meet federal laws that regulate high pressure cylinders intended for transport across state lines. Best regards - Al. KanOx (now owned by Airgas - so the rules now have changed) once upon a time would only sell/fill 80 cf or less customer owned cylinders not sure about the markings though. The variations around the country on cylinder markings, even differences in the same companies, amazes me! All my cylinders came from Airgas, and all but one of them came from a re-seller of Airgas cylinders! There are no markings on the neck rings of any of them except the manufacturing data and DOT markings. There is a stick-on label that describes the contents of each of them, but that's it! Post photos, respond to polls and access other special features. Page generated in 1,663,274,635.04035 seconds with 10 queries. All times

Nov 18, 2021 · Compressed Gas Purchases and Cylinder Rentals>Returns. Servicing for Customer-Owned Gas Cylinders. Effective January 1st, 2022, the Central Storehouse will no.. Never pick a fight with an old guy. Old guys are too smart to fight and get hurt. They'll just kill you and get it over with. Does your company need a quote for gases, welding equipment, safety products or services?

Whether your company is big or small, we can help. Miller  
thead200le (with Miller HF Tig trailer mounted). Never pick a  
fight with an old guy. Old guys are too smart to fight and  
get hurt. They'll just kill you and get it over with. If this is  
your first visit, be sure to. Disclaimer; "I am just an asshole  
welder, don't take it personally.". Again, t. Just the fact you  
are on the forum asking questions means you have doubts.  
Listen to those voices. Should I take the C25 back and get a  
bottle of 98/2? Or do I just get 98/2 or 90/10 for both  
bottles? \*\*\*\*. I'm thinking about this too much. I call BS I  
have quite a few cylinders larger than 80CF that I own free  
and clear. It is all a scare tactic that the big welding supply  
companies use to keep them all in their hands. If you have  
the cash and want to buy a 300cf tank you can. I swapped  
my 125 Argon Saturday and the exchange had a name on  
the ring. I informed the salesman, and he said on 125 it  
didn't matter any longer. Well, I rolled the dice and bought  
three cylinders from the guy. They had current tests and  
were all labeled Linde. The oldest cylinder was made in  
1932! He's taking the cylinders to his local supplier and  
payment will be made when they agree to exchange them.  
Please note: The address on the W-9 is not a "remit to"  
address. Please use the address found on your invoice.

From my personal experiences, which are VERY limited. My local welding shops (four that I checked with) all will trade out my 125cf tank. That includes Airgas. Some will also give me the option of them filling my tank on site. Never pick a fight with an old guy. Old guys are too smart to fight and get hurt. They'll just kill you and get it over with. If you have a customer-owned cylinder, the process below is to be used for ordering gases. QUESTIONS OR COMMENTS ABOUT THE SUPPLY CHAIN MANAGEMENT WEBSITE? CONTACT OUR WEB TEAM. Read the latest industry news on Airgas Thinks. Read the latest industry news on Airgas Thinks. Same thing with Lindweld, except they didn't print out the "sale of asset" part - and the cylinder had the usual Lindweld markings, etc. Well, I got the cylinders back from the supplier and had no problems. He suggested I try some C25 and I got a small bottle. I picked up a large bottle of 90/10 and a small bottle of Argon for aluminum. I'm questioning why I even want to try the C25 and was thinking of returning it. Unless I'm mistaken, 90/10 will handle everything from thin automotive sheet metal up to 1/2" plate. I'm afraid the C25 will just sit in the corner and never get used. If that's the case, then I'd rather have a second bottle of gas to replace an empty. Welcome to

WeldingWeb.com, the ultimate Source for Welding Information & Knowledge Sharing! Airgas took Tractor Supply to court for letting customers turn in AG cylinders and picking up theirs and won. Coca Cola and Pepsi have threatened many LWS with lawsuits for swapping out their 20# CO2 cylinders and I promise I took a couple in based off the customer telling me they bought them. We had to find all the ones we had taken and turn them into Coke. So it's really a tricky situation. One comparison I was told- You buy a movie from a local Movie Store with their sticker on it then go to another one and try to sell it or trade it for one of theirs with the original companies sticker still on it, referencing neck ring here, they probably will call the cops on you or tell you to leave. Another one If someone tried to sell you a welder that had a sticker saying this machine belongs to XY Construction, neck ring again, and you bought it anyway then the cops showed up and took it away because it was stolen and the construction company could prove via records it was theirs. Would you be mad at XY or the thief? Page generated in 1,663,274,587.27104 seconds with 10 queries. If this is your first visit, be sure to. Keep track of the amount of funds available on the purchase order. When the PO runs out of funds, do not

amend it with a second line to allow for additional payments. Instead, create a NEW Requisition, following the same structure outlined above. They may charge you for that but they still do not like taking the risk. Effective January 1st, 2022, the Central Storehouse will no longer refill or service customer-owned gas cylinders. This page provides instructions on processing gas refills for customer-owned cylinders. What I do know is that locally, I can not buy a cylinder larger than 80cf. The only way I can own a larger cylinder is through a private party sale such as this. I've been looking for two years and this is the first local seller that I've found. Queen cylinder will sell me empty reconditioned cylinders, but shipping is pricey and I still need to get them filled. I talked to my preferred welding supplier this morning and the response that I got was "I'll have to see them". My guess is that he wants to look at the neck for a name. I know that for my large Oxy/Ac set, that the necks were scrutinized and I had to produce a bill of sale. Then they took my cylinders, hydroed them and returned the same cylinders back to me. I'd have to look at those cylinders to see if they say customer owned or not. I also can't remember if the neck had a manufacturer/original owner on it. They are a liability

because when they buy tanks they buy them from a company they can trust. Or at least that's all the information I could glean out of the PDF. Which I greatly appreciate having the chance to read.
