How to Say No (Without Being an Asshole). Control All Your Smart Home Devices in One App. How to Switch the Mouse Buttons in Windows 10. Here's how to change the default scroll speed:. In other words, when you click and hold the middle mouse button, you can then drag your mouse forward or back to scroll up or down the page, respectively. This feature is intended for folks who don't have a scroll wheel, but it works just as well with scroll wheels–and I know many people who prefer the speed of middle-click scrolling to the slow, steady pace of wheel scrolling. You can probably look around for more functions. . A possible variant of this mod is, instead of leaving the main button alone, move it to the opposite corner of the button. This means you have to basically do what I describe twice. In that case, you want to disconnect the existing button and use another test point. Go to

Settings > Devices > Mouse > Select your primary button to choose whether the right or left button is primary. By default, the left mouse button is the primary, but you can change that to make the right button primary if that's more comfortable for you. National Wildlife Day: Do Giraffes Hold the Key to Treating Hypertension?. How to Check If the Docker Daemon or a Container Is Running. Work kinda never ended today, sorry about that; I'll try to remind her about the vector drawings, we had a rough day. Vector drawings could help too, though that's a lot of work. I think that one ought to be enough, just to show where everything is. That should help people get aligned, then they can follow the written instructions more easily. Click the Uninstall option in the menu bar above the list of updates. On the Buttons tab, adjust the slider for the Double-click speed option, then click OK. Motherboard issues are more difficult to detect and fix. You can sometimes find a bad capacitor using a visual check, physically looking for a bulged, burnt, or blown capacitor. Other motherboard defects usually require specialized software to test and detect. If you suspect your computer's motherboard is defective, we recommend taking your computer to a repair shop to test the motherboard and for help with fixing any issues found. Join reddit Create an account to follow your favorite communities and start taking part in conversations. Create an account. For gaming No matter the size or scope of your favorite game, mouse responsiveness is important. In this case, you may want to consider hard-wired or dedicated gaming options as we discussed above, or simply increase sensitivity on your current device. Bigger workflow If you're expecting a major change in your work patterns, you may also want to think about sensitivity. When you're hitting a jam or falling behind, a few small changes can make a big difference, especially if you aren't working on your primary device. When things don't feel quite right Sometimes errors and updates can impact settings. If something seems off with your mouse input, check the settings before you think about replacements or upgrades. Summary While it's important to know how to change mouse sensitivity, there are other things you can do to avoid mouse issues, too. For most users, this means taking a quick tour through your PC settings and, poof, problem solved. However, keep our tips in mind if you're still experiencing issues, and be sure to check your mouse pad for wear and tear before you buy a new device. I find myself accidentally clicking just resting my hand on it. I'm a thin person with thin hands. But the button, the right one, can't support the weight of my finger resting on it. How Do I Fix a Laptop that Won't Turn On?. CORSAIR COMMUNITY Survey, we want to hear your feedback!. How to test a computer motherboard and CPU for failures. Microsoft releases updates for Windows frequently, to fix bugs and add new features. Unfortunately, sometimes one or more Windows updates introduce new bugs and problems. If your mouse started incorrectly double-clicking after installing a Windows update, that update may have caused the

problem. You can try uninstalling a Windows update to see if that resolves the double-click issue. This thread is archived New comments cannot be posted and votes cannot be cast. However, if the sensitivity of the button is no longer normal compared to what you have used the mouse before, we could look for a possibility that this might due to a mechanical failure. Please contact. I have to always either keep my middle figer at the left edge of the right button or keep my middle finger from resting comfortably to avoid unintentional right-clicks, which really doesn't feel natural and can become an annoyance in games. The actuation force is really low for my right button. I'm not sure if this is unique to my copy or not, and whether I should seek a replacement. It might be caused by the shape of my hand, but I think my hands are average in shape and size, if not smaller, which means the right button should require more and not less effort to click. Does anyone else have the same problem? Is it somehow fixable? i have the same issue, and i was worried o got a faulty unit. but i can see different people reporting the same behaviour. so maybe it's normal? i'm getting used to it tho. I bought the Corsair Harpood RGB Pro Gaming Mouse. Please let us know here why this post is inappropriate. Reasons such as off-topic, duplicates, flames, illegal, vulgar, or students posting their homework. Thank you for the suggestion of moving the right-click functions to a side button. That will work. Meanwhile, I'll locate my warranty information and get working on that as well.. [2349](#) [2350](#) [2351](#) [2352](#) **2353** [2354](#) [2355](#) [2356](#) [2357](#)
