As a consumer, it's your job to make sure that

you're getting what you pay for. The precious metal trade is rife with fraud to this day, but a savvy customer can get along without getting ripped off in the meantime. 925 Silver Testing If there are no silver stamps on the jewelry then this may indicate the jewelry is plated. It may be best to have such a piece tested. Jewelers do such tests by applying acid to a very small piece of material taken from the jewelry. Silver is a precious metal and its authenticity should be verified. A Nitric Acid Test is typically used to check if silver is pure or plated. To do so, jewellers file a small part of the item in a discreet area where it cannot be seen. Jeweller then apply a few drops of nitric acid. If the area turns into creamy white, the silver is pure or sterling. If green, it is probably fake or silver-plated. Keeping Your TEEN Entertained While Learning with Educational Toys.
