Ideally, each should be at 3-5 times the screen size away from the TV. Your statement is saying that LCD's can not resize. If this is true, then when you went to move the screen resolution slider, how did it move? Otherwise, it would just keep snapping back to the default. But indeed, LCD's can resize, because that slider moves. There's one major culprit for this problem, and it's a feature built into many TVs known as "overscan." If you're noticing that part of your screen is cut off and you can't access your taskbar or the edges of your screen, there's a pretty dated technology to blame. PAL DVDs are (nearly always) 720x576. The picture on a DVD doesn't always go right up to the left/right edge so a few pixels are often cropped off the sides. Due to the way most video codecs work, it is

usual to choose a resolution that is exactly divisible by 16 when encoding video. 720 is divisible by 16, but since a few pixels have been cropped it is no longer 720 pixels wide so 704 is the next nearest resolution. 56 abandoned places around the world and the eerie stories behind them.
